LREE: lanthanum (La), cerium (Ce), praseodymium (Pr), neodymium (Nd), promethium (Pm), samarium (Sm), europium (Eu), and scandium (Sc)

HREE: yttrium (Y), gadolinium (Gd), terbium (Tb), dysprosium (Dy), holmium (Ho), erbium (Er), thulium (Tm), ytterbium (Yb), lutetium (Lu)

# Global production and reserves

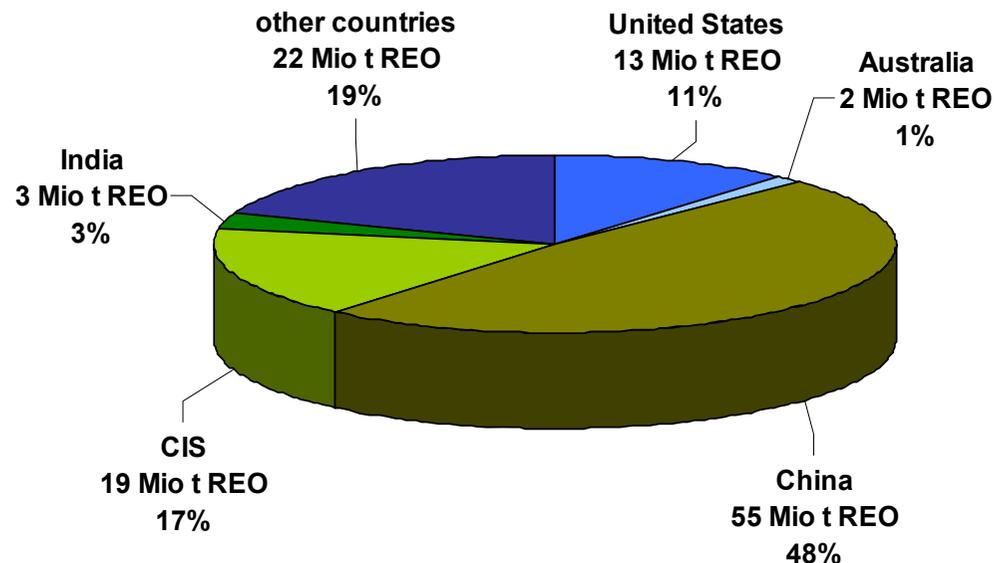

- Global production in 2010: 133 600 t
- Reserves according to USGS: 110 000 000 t (factor 823)  
 (reserve which can be economically extracted)

## World Mine production in 2010 (USGS 2011). REO: rare earth oxide

Country	t REO	Share
China	130 000	97,3%
Brazil	550	0,4%
India	2 700	2,0%
Malaysia	350	0,3%
<b>World Total*</b>	<b>133 600</b>	<b>100,0%</b>

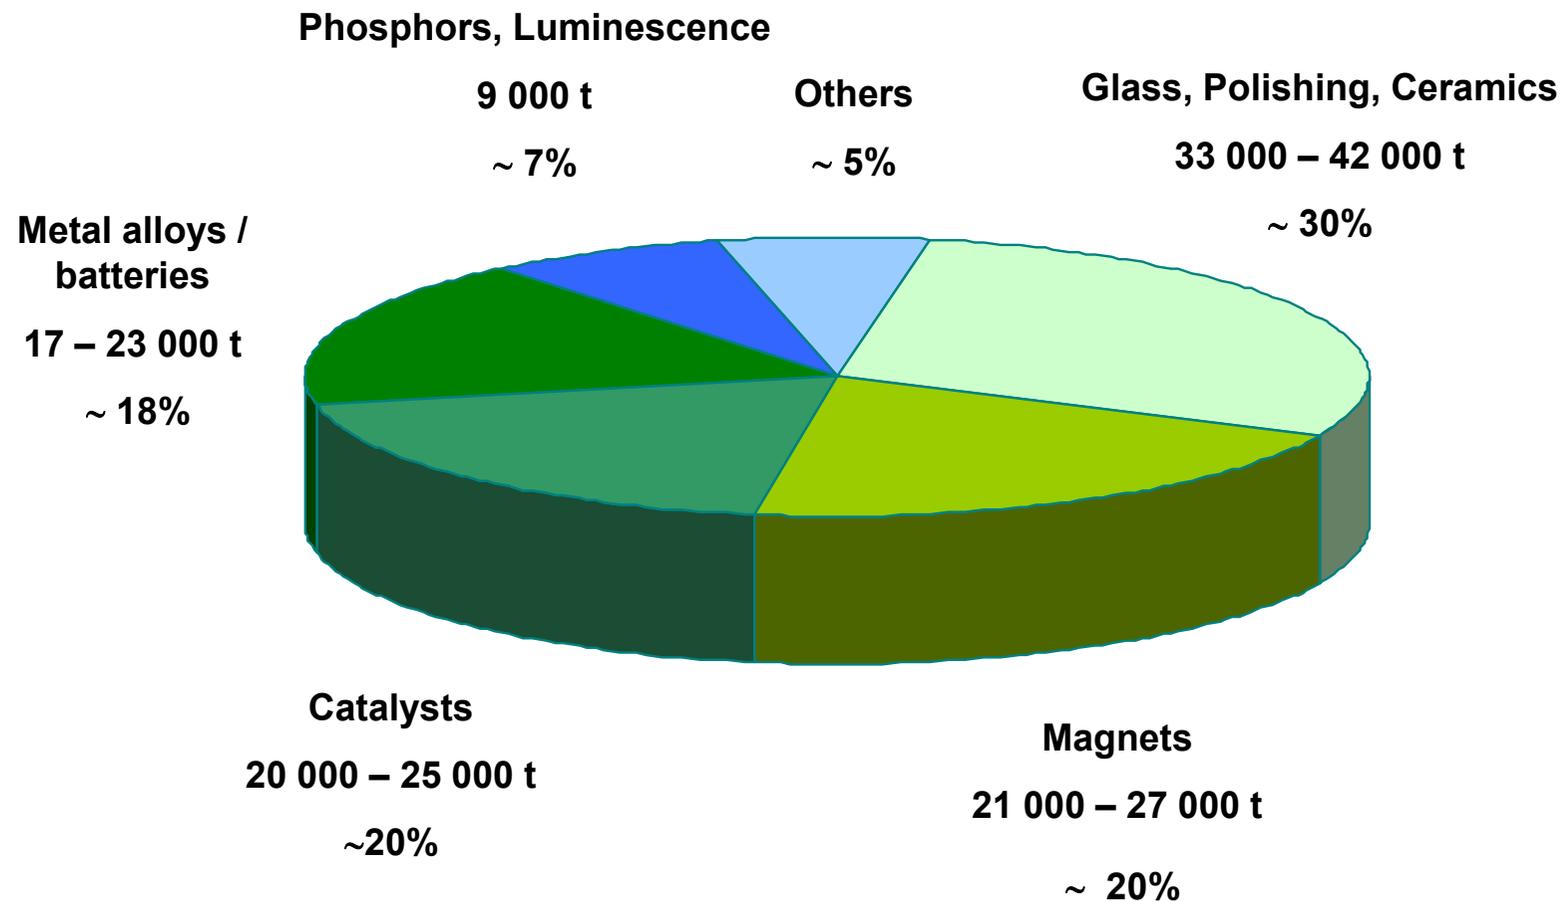

\* without 20 000 t REO illegal mining

## Rare earth reserves by countries (USGS 2011)

# Global demand and development of the demand

## 2008

Unit: t REO per year

Source: Compiled by Oeko-Institut from the sources Jefferies 2010, Oakdene Hollins 2010, Kingsnorth 2010, GWMG 2010, BGR 2009 and Lynas 2010

## Rare earths used in consumer electronics

Products	Rare earth/Components	Amount	Unit
Variable-frequency air conditioning	NdFeB	100-200	g/unit
		250	g/unit
DVD Player/DVD ROM/Driver	NdFeB	5	g/unit
E-Bike	NdFeB	500	g/unit
		300	g/unit
Hard disc drives (HDD)	NdFeB	15	g/unit
		22	g/unit
Loudspeaker	Magnet	153	g/unit
	NdFeB	50	g/unit
Mobil phone	Permanent magnet	5	g/unit
Mobil phone	light phosphors	0.006	g/unit
Laptop	light phosphors	0.05-0.6	g/unit
LCD TV	light phosphors	4.5-6	g/unit
Plasma TV	light phosphors	100-125	g/unit
LCD Display	light phosphors	1.5-2.5	g/unit
fluorescent lamp (market average)	Lanthanum	0.35	g/unit
	Cerium	0.46	g/unit
	Europium	0.20	g/unit
	Terbium	0.19	g/unit
	Yttrium	2.87	g/unit

Example: NdFeB: 15g/unit

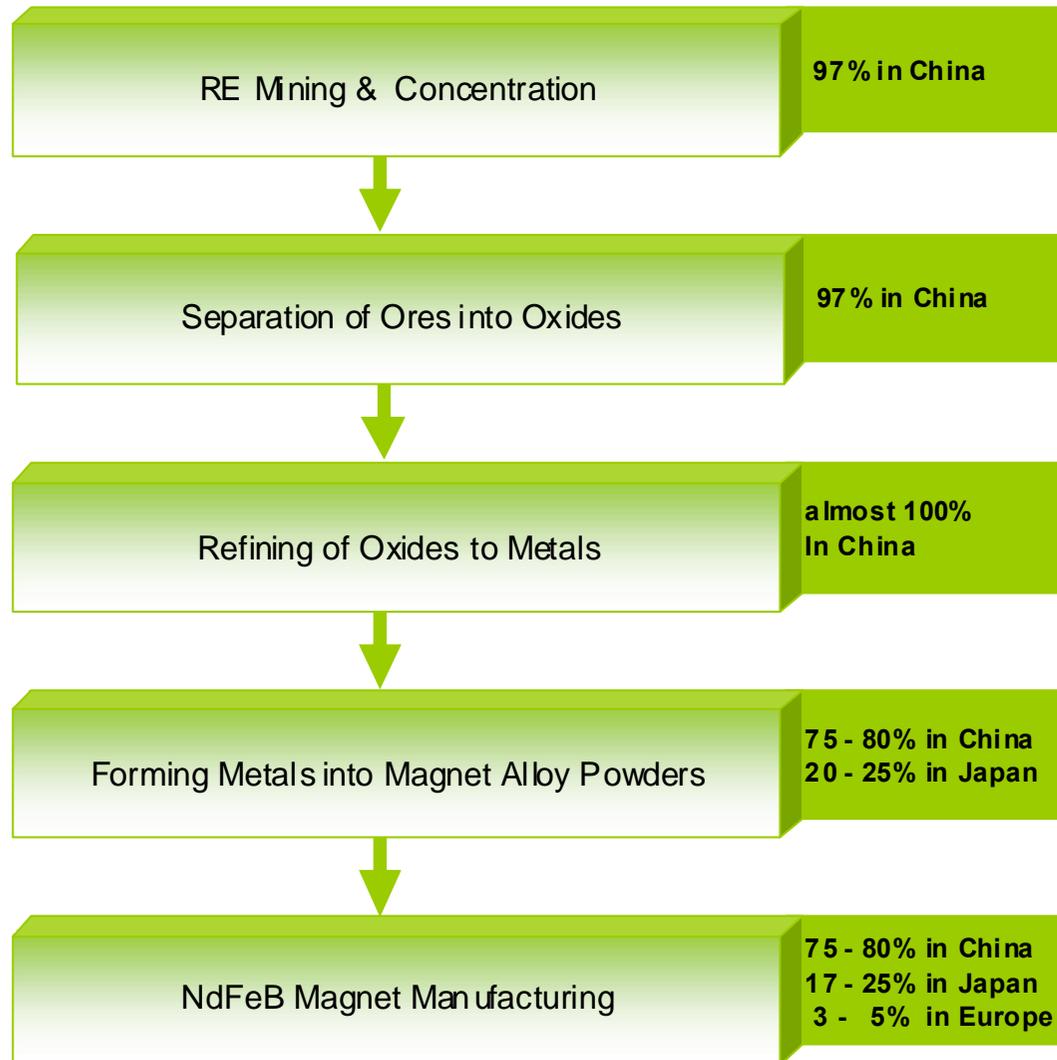

HDD shipment in 2010: 651 million

9765t NdFeB≈3039t REO

→ 13% of global demand of rare earth for magnets

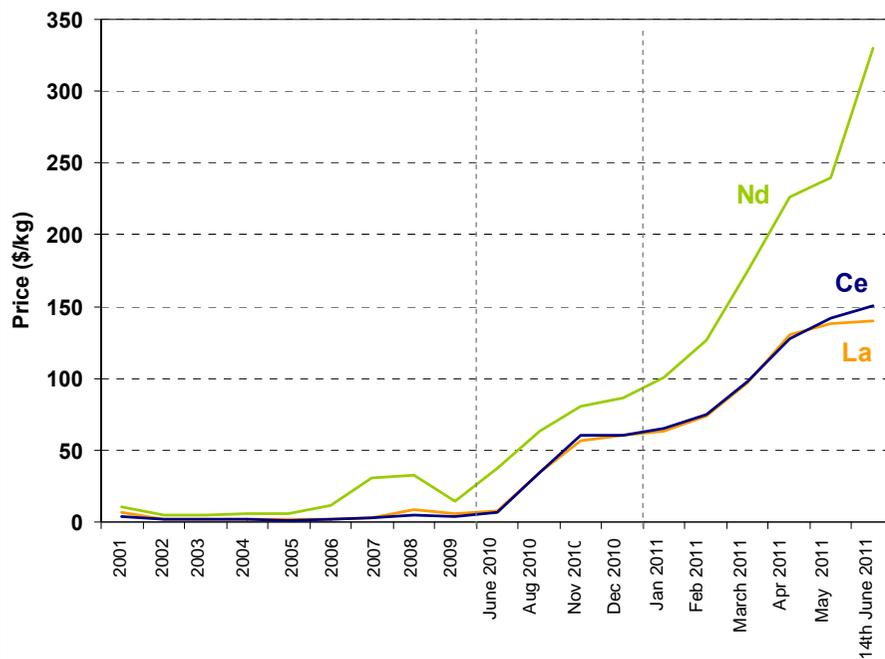

# Global magnet production

- **Most new energy efficient lighting systems contain rare earths (compact fluorescent lamps, LED, plasma displays, LCD displays)**
- ↗ **High growth rates due to the ban on classic incandescent bulbs, dissemination of LEDs and shift to plasma and LCD displays**
- **Substitutions are rare. ⇒ R & D required for alternative phosphors with high efficiency and high light quality**

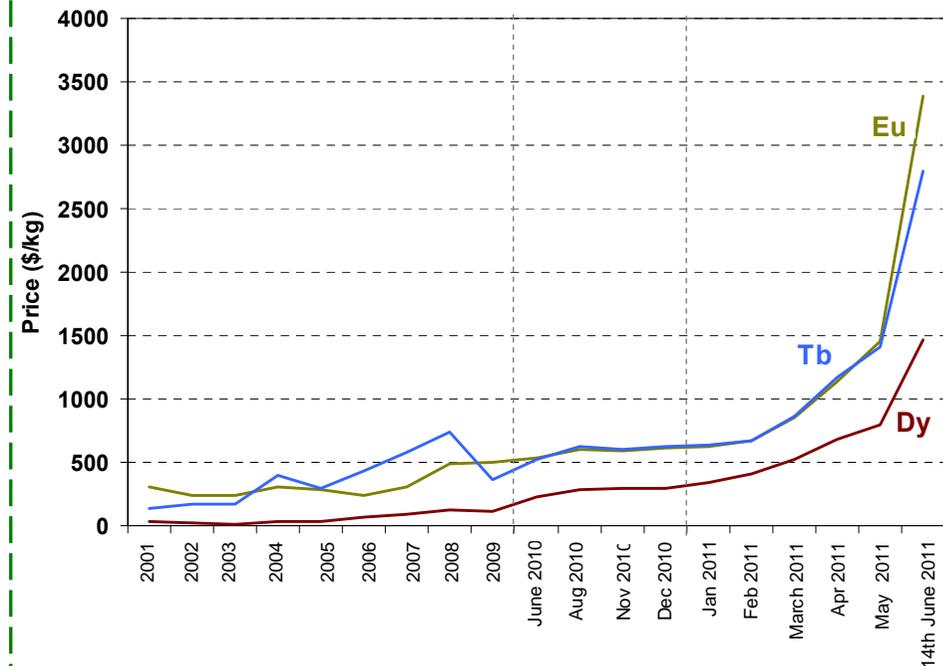

# Development of prices

## Light rare earth elements

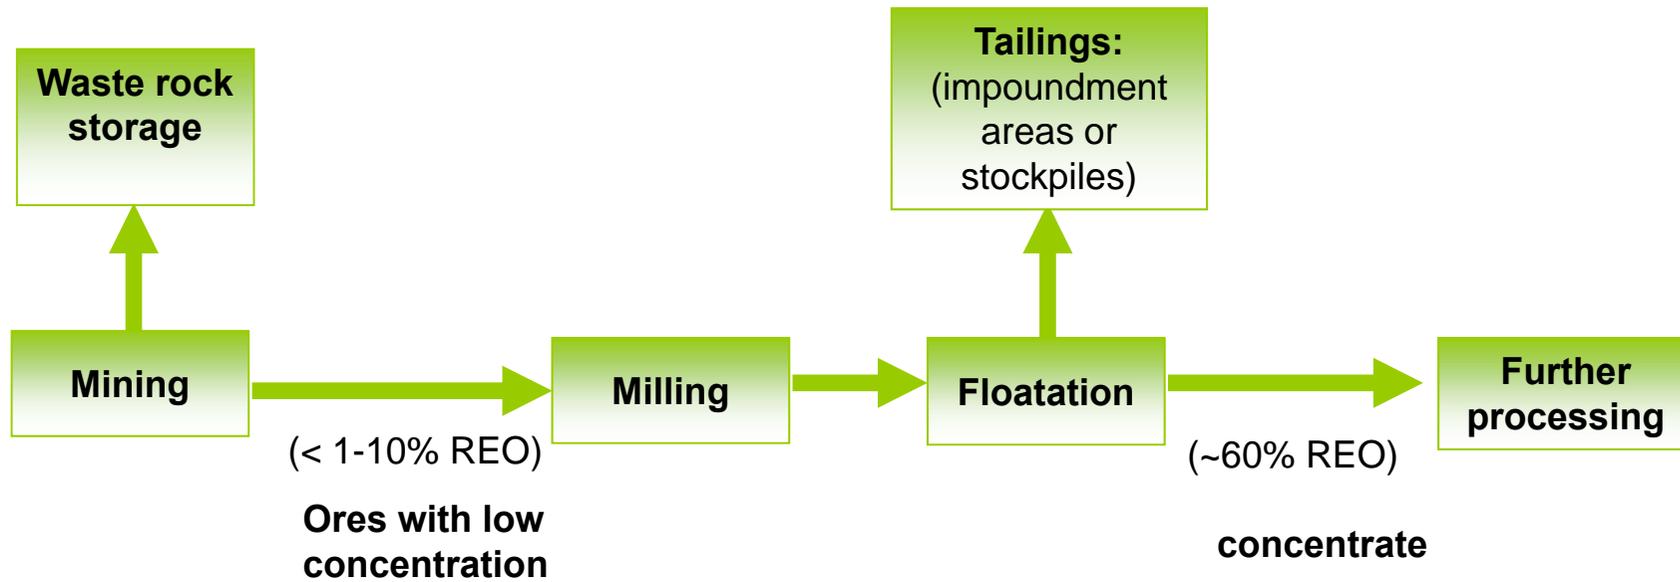

- Neodymium Oxide
- Cerium Oxide
- Lanthanum Oxide

## Heavy rare earth elements

- Europium Oxide
- Terbium Oxide
- Dysprosium Oxide

# Risks of REE mining without Environmental Protection Systems

# Advantages of recycling

---

- **Secondary REE potential in Europe.**
- **Lower dependency on foreign material supply.**
- **Build-up of know-how on rare earth processing.**
- **No radioactive waste in processing.**
- **Environmental benefits regarding air emissions, groundwater protection, acidification, eutrophication and climate protection.**

# Developing a recycling scheme

## Green technologies call for “green metals”

- There are manifold initiatives for sustainable mining.
- Among them are certification schemes addressing different problems:
  - Environmental, small-scale mining, safety issues, human rights.
- Increasing interest in politics and industry on certified minerals
- Today’s mining companies could be interested in certification schemes or similar co-operations in order to highlight their environmental efforts.
- The Analytical Fingerprint is a control instrument if other control mechanism fail.

- **Identification of REE with high relevance: Dysprosium; Terbium; Yttrium; Lanthanum; Neodymium; Europium; Praseodymium**
  - **potential shortages in the short-term**
  - **important role in Green Technologies**
- **Rare Earth Mining and Processing shows high environmental risks → sustainable mining initiatives like certification schemes should be integrated into an environmentally sound strategy.**
- **R & D needed for all applications concerning**
  - **avoidance / substitution**
  - **higher material efficiency**
  - **recycling**

## Thank you for your attention!
